

# Stetra Heat

**Stetra Heat** is an uncoupling and waterproofing membrane specifically designed for the installation of electric underfloor heating systems. With a slim profile, it offers effective protection against thermal and mechanical stresses, preventing cracks in the tile covering.

Its structure allows for even heat distribution, improving the efficiency of the heating system and ensuring optimal comfort in indoor environments.

## Features

Roll Length	Roll Width	Roll Weight	Mass	Thickness
-------------	------------	-------------	------	-----------

15,15 m	99 cm	12,5 kg	840±5% g/m2	6 mm
---------	-------	---------	-------------	------

## Composition

Three-Dimensional Polymer Sheet

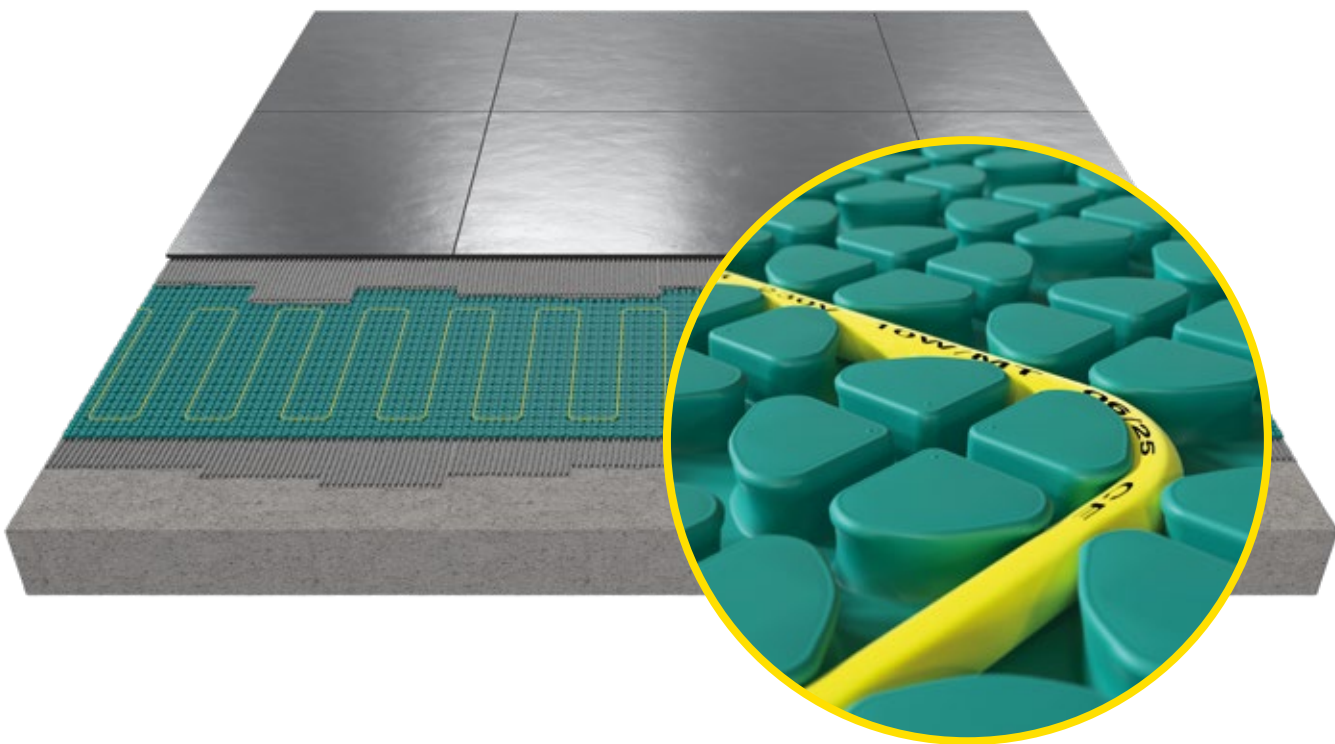

PP Nonwoven Fabric

## Application

**Stetra Heat** is ideal as an intermediate layer between the screed and the tile finish in electric underfloor heating installations. The membrane facilitates cable installation and ensures even heat distribution, increasing energy efficiency. It is suitable for residential and commercial areas including bathrooms, kitchens, and living spaces where fast, even heating is required.

Thanks to its easy installation and compatibility with different coverings, it is a versatile and reliable solution for both new builds and renovation projects.

# Stetra Heat System

Complete System for Electric Underfloor Heating.

**System Components:** Stetra Heat, Heating Cable, Digital Thermostat, Stetra Band and Preformed Corners.
