

## Stetra Band

**Stetra Band** is a flexible polyethylene waterproofing strip designed to seal joints and connections between waterproof membranes. Its low thickness ensures smooth installation, and its surface finish promotes strong bonding with mortars and sealants for long-lasting connections.

**Application:** **Stetra Band** is used to seal linear junctions between floors and walls, and for connecting membranes in waterproofing systems. Ideal for:

- Shower, spa, and bathroom walls
- Junctions between membranes and trays, bathtubs, or sinks
- Structural or movement joints requiring elasticity and sealing

It is quickly installed by overlapping membrane edges by at least 5 cm and embedding the band in adhesive or mortar to form a continuous waterproof layer, resistant even to structural movement.

Roll Length	Roll Width	Thickness	Tensile Strength	Water Resistance
30 m	150 mm 250 mm	0,44 mm	MD: 300±15% N/5cm CD: 160±15% N/5cm	waterproofing

## Angolari Stetra

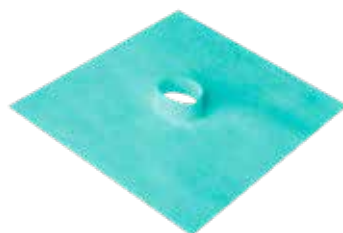

**Angolari Stetra** are prefabricated waterproof components designed for 90° internal and external joints, made from reinforced polymer membrane. Their seamless monolithic design ensures perfect water tightness, while the slim thickness minimizes bulk in corner layering.

The flexibility of the material allows easy adaptation even in corners that are not perfectly square, always ensuring a durable seal—ideal for preventing water infiltration and mold formation.

**Application:** **Angolari Stetra** are designed to effectively seal connections between walls and floors or between adjacent walls in waterproofing systems using membrane technology.

Corner type
internal
external

## Stetra Tub

**Stetra Tub** is a reinforcement collar for pipe penetrations, consisting of a flange made of flexible waterproof sheet with a thermoformed central hole featuring a 4 cm high upstand. The non-woven fabric finish facilitates adhesion with mortars and sealants, ensuring a secure and long-lasting joint.

Roll Length	Roll Width	Hole diameter	Resistance to water penetration
150 mm	150 mm	19 mm	waterproofing
300 mm	300 mm	39 mm	waterproofing
300 mm	300 mm	49 mm	waterproofing
300 mm	300 mm	62 mm	waterproofing
300 mm	300 mm	74 mm	waterproofing
300 mm	300 mm	89 mm	waterproofing

## Stetra Butyl Tape

**Stetra Butyl Tape** is a high-performance self-adhesive sealing tape made of butyl rubber, surface-coated with polypropylene non-woven fabric. The butyl adhesive ensures excellent adhesion on both porous and smooth surfaces (e.g., concrete, drywall, marble, plastic, glass, bituminous membranes), while the non-woven surface is compatible with most adhesives (cement-based and others). It allows effective sealing near joints and is ideal under ceramic, marble, and wood coverings.

Roll Length	Roll Width	Adhesive type
15 m	100 mm	butyl rubber
