

Soma Sound Band

Code	Thickness	Length	Width
SSB55015	5 mm	50 m	15 cm
SSB55025	5 mm	50 m	25 cm

Soma Sound Band is a self-adhesive perimeter strip made of non-cross-linked expanded polyethylene, designed to provide both acoustic and mechanical separation between floating screeds and surrounding walls or structural elements. Thanks to its practical L-shaped configuration, it ensures quick and easy installation while maintaining the continuity of the insulating layer along the entire perimeter of the room, thereby contributing to the overall acoustic performance of the system.

Soma Sound Band PRO

Code	Thickness	Length	Width
SSBP550185	5 mm	50 m	18,5 cm
SSBP55025	5 mm	50 m	25 cm

Soma Sound Band PRO is a self-adhesive perimeter strip manufactured from physically cross-linked closed-cell polyethylene foam, specifically developed for high-performance floating floor systems. Thanks to its practical L-shaped configuration, it ensures quick and easy installation while providing effective acoustic and mechanical separation between the screed and perimeter walls. This helps optimize the performance of the entire sound insulation system, contributing to improved acoustic comfort and long-term reliability.
