

PlenaPur Façade

PlenaPur Façade 180 is a waterproof and breathable membrane made of polyester non-woven fabric with an innovative polyurethane coating that provides exceptional protection against UV rays. The membrane's smooth surface allows incident or infiltrating moisture to safely drain away.

PlenaPur Façade 200 is a waterproof and breathable membrane for both roof and façade applications, made of thermoplastic polyurethane combined with polyester non-woven fabric. It features enhanced fire reaction properties, classified as **B s1 d0**.

PlenaPur Façade are suitable for use on roofs or ventilated façades with open joints up to **50 mm wide** and a maximum of **40% exposed surface area**.

Features

Product	Rolls for Pallets 80x120	Roll Length	Roll Width	Roll Weight	SD	Tensile Strength	Reazione al fuoco	UV Stability
PLENAPUR FAÇADE 180	16	50 m	1,5 m	15 kg	0,13 m	MD: 210±15% N/5cm CD: 250±15% N/5cm	E	with warranty 10-years*
PLENAPUR FAÇADE 200	16	50 m	1,5 m	15 kg	0,13 m	MD: 400±15% N/5cm CD: 320±15% N/5cm	B-S1d0	12 months**

*Applies only to partially open façade membranes with a maximum joint proportion of 40% and a maximum joint width of 50 mm.
**Refers to the average annual solar radiation; as periodic radiation increases, the maximum exposure duration to UV rays decreases proportionally.

Composition

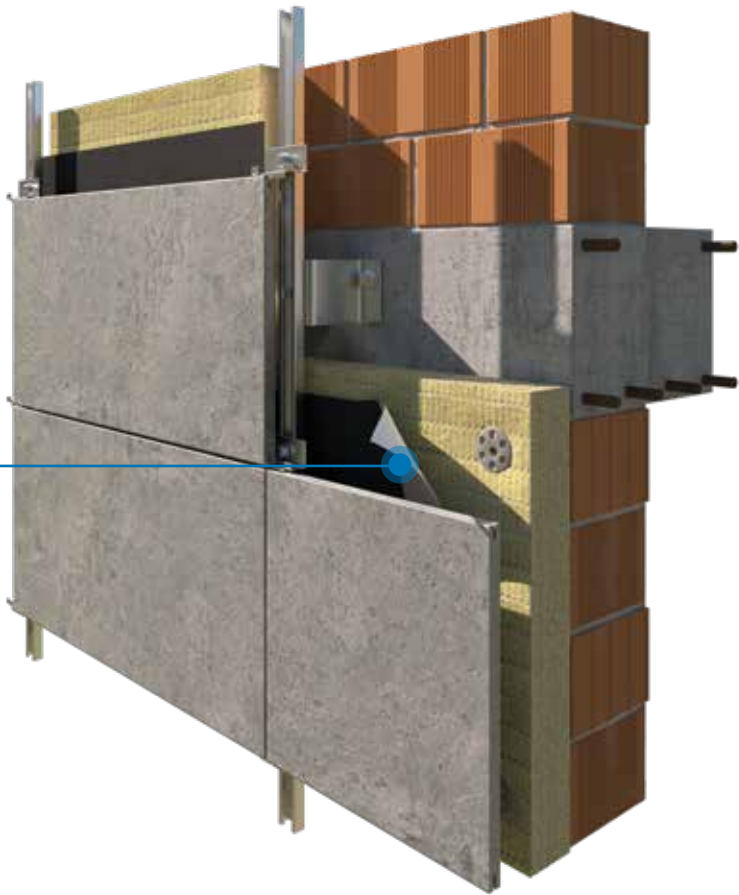

Polyurethane Coating

Polyester Nonwoven Fabric

Application

PlenaPur Façade is designed as an accessory for ventilated façade systems. Thanks to its polyurethane coating, it provides an effective barrier against wind and water infiltration, while ensuring the breathability needed to prevent condensation. It can be easily applied over insulation or the installation substrate, helping to enhance the durability and long-term performance of the façade.
