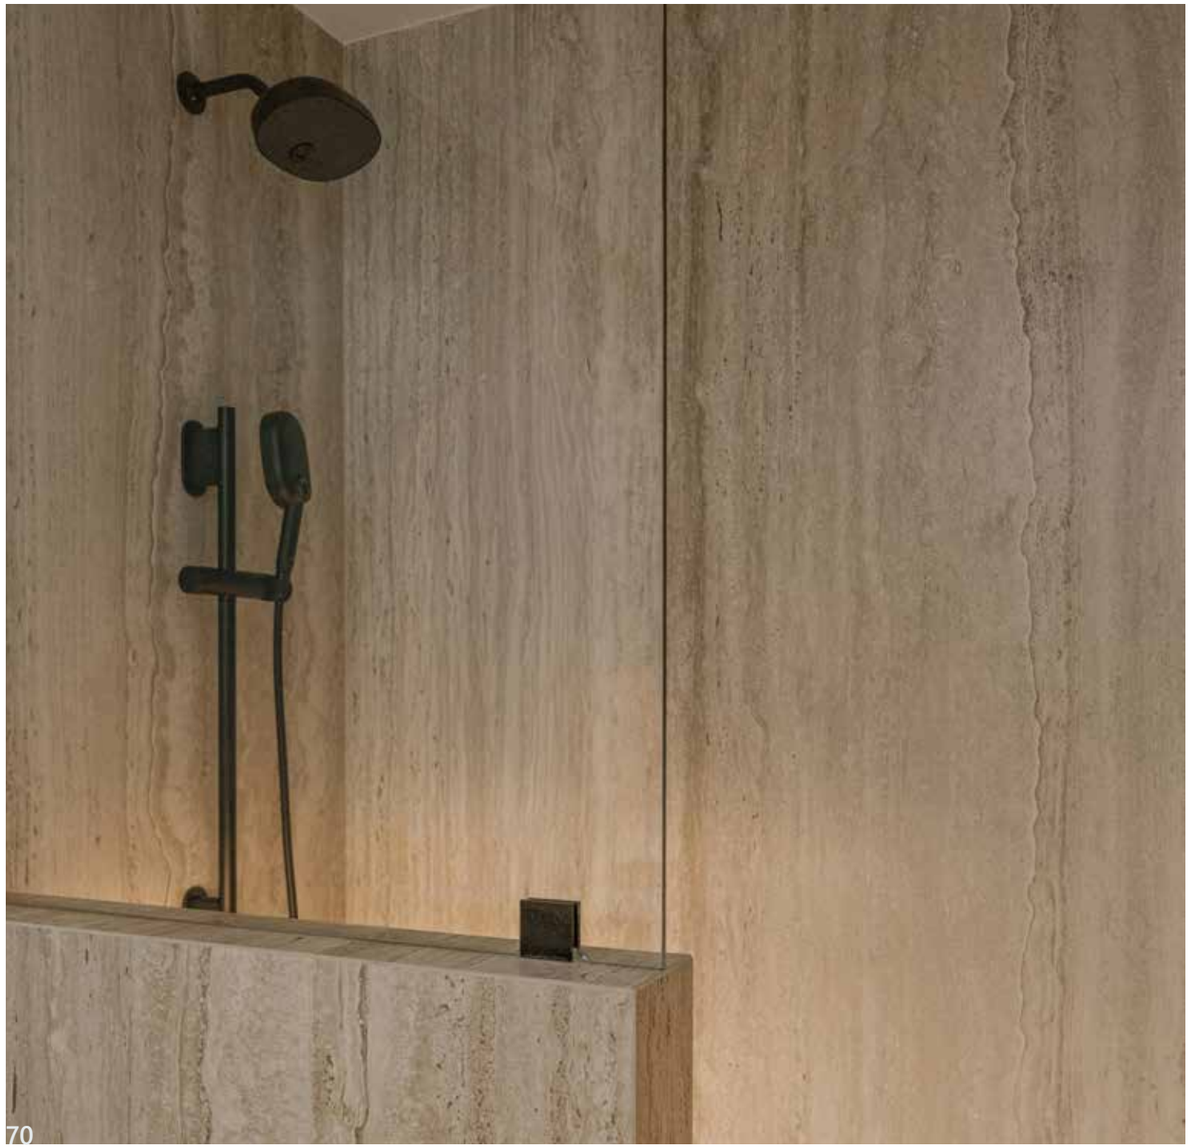
Stetra Board

XPS Board

Stetra Board is a waterproof building panel specifically designed for use in wet areas, serving both as a construction board and a waterproofing material.
The panel features a closed-cell XPS core that is waterproof and resistant to mould growth, while its surface layer consists of a special cementitious coating reinforced with a glass fibre mesh.
Stetra Board is CE marked and has been tested to ensure compatibility with the leading tile adhesives and mortars available on the market. Lightweight, easy to handle, and quick to cut and install, Stetra Board panels are an ideal solution for bathroom construction and renovation projects. They can be used to create shower walls, shelves, benches, bathtub surrounds, and a wide range of custom structures ready for direct tiling.



Stetra Board

Stetra Board is designed to create waterproof substrates for ceramic tile coverings in indoor wet areas and sheltered outdoor environments. It is ideal for:

• Shower walls, bathtub surrounds, washbasin countertops, and bathroom furniture;
• Straight walls and partition walls installed on timber, metal, or masonry structures;
• Shelves, bathroom countertops, and other load-bearing structures ready to be finished with ceramic tiles.

Stetra Curved Board

Stetra Curved Board is a prefabricated panel with pre-cut grooves, specifically designed to provide maximum flexibility in the creation of curved and shaped surfaces.
Ideal for customized architectural applications, it enables the precise design and construction of rounded structures and creative forms.
A range of sizes is available to meet specific project requirements.
